

STOCKINGER SAFETY FIRST CLASS - PROFILE

WORLD CLASS SAFETY FUSING HIGH-GRADE SECURITY TECHNOLOGY WITH BREATHTAKING DESIGN

“Stockinger’s passion is to enrich the conventional world of characterless safes with a high class product that is as secure as a bank vault, as precise as a master time piece, and as beautiful as a piece of the finest art,” says Dominik von Ribbentrop, owner of Stockinger Safety First Class. “For our Bespoke Line, we offer a selection of models in different sizes, levels of security, and options. We only use the best materials and consistently meet the challenge of our customers’ most extravagant wishes with discretion and the very best in professional service.”

MAXIMUM SECURITY – PURE AESTHETICS

Stockinger Safety First Class GmbH has been producing unique safes and security systems in Neuried near Munich for over 30 years. Quality control, first-class service, and absolute discretion are held in the utmost regard at Stockinger. The most convincing security fact is that a Stockinger safe has never yet been broken into. The company offers three different editions: The Bespoke Line, the Safe HYAS and the “Stockinger for Bentley”-series. Each safe is produced using the best possible plating and projects a striking, beautiful individuality in its appearance. While the user-friendly digital automatic Stocktronic accessing system offers the absolute freedom to enjoy valuables conveniently at any time.

UNCOMPROMISING QUALITY AND ULTIMATE RELIABILITY

The safety level of Stockinger safes is equivalent to that of banks (security grade III and IV, according to the current European standards EN 1143-1). Two fully electronic and independently powered motor-driven deadlocks form the core of the closure. They unite the best mechanical and electronic devices of today’s safety technology in one component. Further intrinsic values of this advanced technology are the integrated mechanical theft-deterrence, an additional electronic theft-deterrence, and a casing that contains several shells as well as a special fire-proof sealing. The highlight is the Stocktronic device that can set off an alarm by entering a special alarm code only clients know.

SAFETY IN AESTHETIC PERFECTION

At Stockinger good design is as important as best practice from a safety-related and technical point of view. Thus research, technical development, construction and design are equal components of the fabrication of each safe. All edges are soft to the touch and the inimitable operating drawer operates with fingertip pressure. The satisfying optical depth of the varnished surfaces can only be achieved through a careful multi-stage process. All interior surfaces including the inside of the door are covered with high gloss polished brass and chrome plating, lending the safe to an impressive elegance that only the Stockinger's master craftsmen and the owner will appreciate.

THE STOCKINGER BESPOKE LINE

The Stockinger Bespoke Line consists of the CUBE, ISIS, CHIMERA and PHOENIX – sizes range from just over two feet in height for the CUBE up to approximately six-feet in height for the top of the line. Depending on model selection, prices vary between 32,000 EUR and 107,000 EUR. Clients may choose from any model and have the safe custom-equipped to meet their distinctive tastes. In addition to the Bespoke Line Series, Stockinger Safety First Class also offers other world-class safes created to fit virtually any need. Using the most experienced craftsmen and artisans, every Stockinger safe is a technical masterpiece of custom-made aesthetic perfection, hand-built following the strictest criteria.

The standard safe consists of a completely plated interior fitted with shelves and drawers customized to the client's requirements. The drawers, compartment, and trays can be created in any combination of dimensions. The special requirements of automatic watches are met by the installation of Stockinger watch winders. Every Stockinger safe is individually manufactured with a unique exterior coating. Bespoke Line safes come in a variety of finishes and extravagant interior finishes, including ostrich leather, mahogany, engravings or interior lights. Humidors, specially-lined jewellery trays and picture shelves are just a few of the interior fittings that Stockinger can create
